

A Simple DIY Guide to Cleaner Air

Video
Instructions
and Additional
Resources

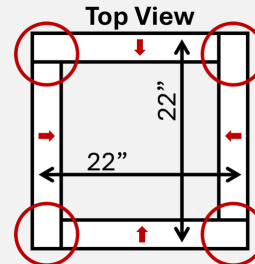

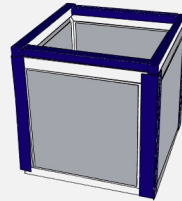

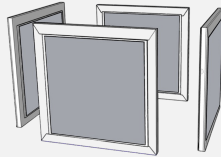

1

Gather materials

2

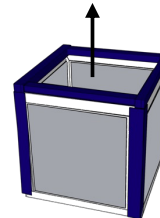

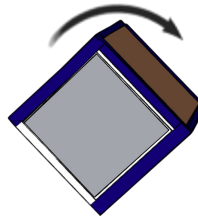

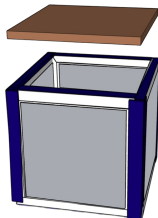

Build a cube with the filters

Stop and check:
1) Airflow **arrows** point inside cube
2) All four corners are overlapping / "L" shaped joints

3

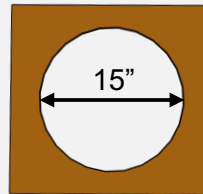

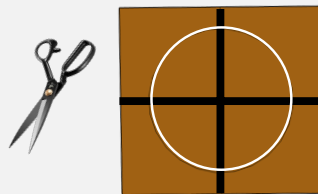

Add bottom

Stop and check:
Check all edges to ensure the duct tape creates an airtight seal. If air can leak out, the purifier won't work correctly.

4

Cut shroud (optional)

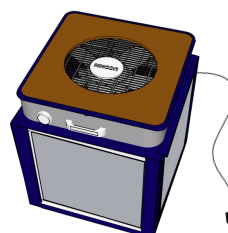

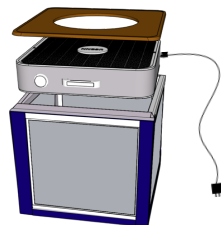

Cut 15" diameter circle in center of the second cardboard piece

While not necessary, the shroud improves performance by up to 60%.

5

Add fan and shroud

If using a shroud, tape it securely to the fan. Duct tape can also be used to create a shroud; see the video for instructions.
